PRANAY HARWANI  
SNEHA KUMARI  
SUVIGYA SAXENA  
TANMAY MALATKAR

# WHY RESOURCE UTILIZATION IS SO IMPORTANT ?

Let's have an example

## CASE 1

### BOTH MACHINES DO THE SAME WORK

The process timing of **red** is 4min.  
The process timing of **blue** is 8min.

Neglecting the delays & interarrival time.  
The function of both the machines are same.

## CASE 2

If we operate it for one hour.

Case 1 is producing  $15+8+8 = 31$  units/Hour

Case 2 is producing  $8+15+15 = 38$  units/Hour

Clearly, case 2 is more productive than case 1, as it produces 7 units more.

# CONCLUSION

**Number of  
Resources**

**Preference of  
Resources**

**...Are Important.**

# PROBLEM & AIM

LARGE  
POPULATION

TIME  
CRUNCH

LESS GYM  
FACILITIES

SLOT A

SLOT B

SLOT N

- The number of people allowed per slot is fixed. (Around 70)
- Is there any way that we can increase the number of users per slot ?

# BY SIMULATING A MODEL

- And Studying the behavior of
  - RESOURCES ( 4 GYM EQUIPMENT)
  - ENTITIES ( MALE AND FEMALE)

We can figure out how we can optimize the slot size

# RESOURCES

**TREADMILL  
(CARDIO)**

**CYCLES  
(CARDIO)**

**FREE WEIGHT  
(WEIGHTING)**

**WEIGHT MACHINE  
(WEIGHTING)**

# HOW WE HAVE STRUCTURED OUR MODEL

**ENTERS**

**CHOICE 1**  
**(CARDIO VS**  
**WEIGHT**  
**LIFTING)**

**CHOICE 2**  
**(TREADMILL**  
**VS**  
**BIKES)**

**CHOICE 2**  
**(MACHINE**  
**VS**  
**FREE WEIGHTING)**

**VS**

**CHOICE 3**  
**(LEAVE**  
**VS**  
**CONTINUE)**

**VS**

# SURVEY AND ANALYSIS

## MALE

Count of Treadmill or Cycle ?

Count of Cardio or Weightlifting ?

Count of Free Weight vs Weight Machine?

FEMALE

Count of Cardio or Weightlifting ?

Count of Treadmill or Cycle ?

Count of Free Weight vs Weight Machine?

ARENA  
MODEL

# SURVEY AND ANALYSIS

## MALE

Distribution Summary	
Distribution:	Exponential
Expression:	EXPO(1.58)
Square Error:	0.017219
Chi Square Test	
Number of intervals	= 4
Degrees of freedom	= 2
Test Statistic	= 4.9
Corresponding p-value	= 0.0093
Kolmogorov-Smirnov Test	
Test Statistic	= 0.11
Corresponding p-value	> 0.15
Data Summary	
Number of Data Points	= 70
Min Data Value	= 0.00651
Max Data Value	= 7.73
Sample Mean	= 1.58
Sample Std Dev	= 1.77
Histogram Summary	
Histogram Range	= 0 to 8
Number of Intervals	= 8

## Entity & Average Number in Queue

Treadmill.Queue.NumberInQueue	6.7872	(Insuf)	.00000	17.000	16.000
Bikes.Queue.NumberInQueue	4.6150	(Insuf)	.00000	11.000	10.000
Weigh Machine.Queue.NumberInQueue	4.8794	(Insuf)	.00000	12.000	11.000
Free machine.Queue.NumberInQueue	5.3632	(Insuf)	.00000	12.000	11.000

## Resource & Average Queue waiting Time

Treadmill.Queue.WaitingTime	.22112	(Insuf)	.00000	.43016	8
Bikes.Queue.WaitingTime	.20836	(Insuf)	.00000	.34407	4
Weigh Machine.Queue.WaitingTime	.14634	(Insuf)	.00000	.29427	4
Free machine.Queue.WaitingTime	.15883	(Insuf)	.00000	.39761	3

# OBSERVATION

Resource & Average Queue waiting Time

**TREADMILL** > **BIKES**

Entity & Average Number in Queue

**TREADMILL** > **BIKES**

# MODIFICATION

So,

we can **reduce** the number of treadmills by 1  
and **increase** the number of bikes by 1

# CONCLUSION

**THANK YOU**
